

**iShell 4 is a powerful tool for building secure, interactive CD and DVD-ROMs. With iShell 4 you will create your first CD-ROM in 30 minutes. Professional multimedia authoring has never been easier.**

With iShell 4 for Windows XP or Mac OS X, you can produce sales and marketing projects, education titles, virtual tours and dozens of other applications in a fraction of the time required using other tools. Additional software for CD-ROM burning, data conversion, data encryption, and installation are not required.

### Protect

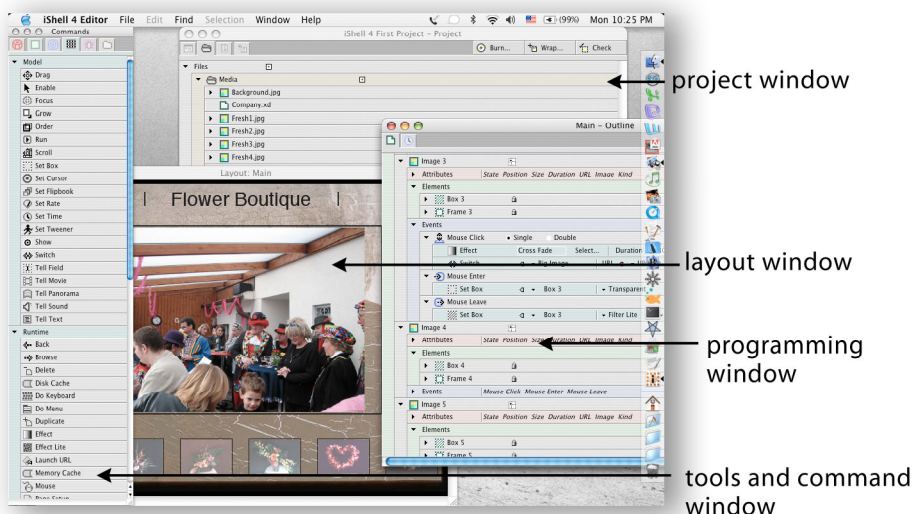

The new "wrap" feature bundles your media into a single, high-performance, protected file. Protect your valuable media assets, and your code.

### Burn

The new "burn" feature allows developers to create and deploy a project right in the easy to use iShell interface. Now, you can burn with one click of the mouse!

### Deliver

Your completed project automatically plays on Windows XP and Mac OS X devices. Installation of all required media player software is handled automatically.

### Features

- CD-ROM Authoring
- Visual programming environment
- Extensive XML support
- Timeline and Animation Editors
- Cross-platform authoring
- Extensive support for QuickTime
- Visual Debugger
- Unicode text support
- Also build kiosks, networked eLearning environments and more

### Showcase

"While at Disney I used Director to make presentations for top executives. There are few situations as

frustrating as trying to make last minute changes in Director with a CEO looking over your shoulder and a full boardroom waiting. . . With iShell, my only concern is, when the client is looking over my shoulder"

### Windows

Pentium class processor  
Microsoft Windows  
98/NT/2000/XP  
32 MB of RAM recommended  
Minimum 10 MB free hard disk space  
QuickTime 5.02 or greater

### Macintosh

Macintosh PowerPC  
Mac OS X 10.2  
32 MB of available RAM  
Minimum 10 MB free hard disk space  
QuickTime 6.0 or greater

### Increase Revenue, Reduce Costs

Significant production time can be saved with iShell 4's reusable objects. Interactive elements are easily manipulated with an expandable, drag and drop, object-oriented environment.
